

Batch Edit

Instructions

1. For the cells with a dropdown: multiple possible values columns, meaning usually the ones that contain text in the cells and not numbers.

1.1 Right click on any cell in any columns that are not in the columns "Last Modified" or in "Debug".

1.2 To modify one cell, you only click right on one cell. For example, in the picture below, you can see I clicked right on a cell in Surface Finish. To modify one cell, you only click right on one cell. A menu bar will appear with four options.

The screenshot shows the AGT Welding Database interface. A table with 10 columns is displayed. The 'Surface Finish' column is highlighted in blue, and a context menu is open over it, showing options: 'Edit Row', 'Edit Selected Rows', 'Edit All Filtered Rows', and 'Edit All Rows'. A red arrow points to the 'Any' cell in the 'Special Joint Type' column of the selected row.

1.3 To modify multiple cells

1.3.1 Select Rows:

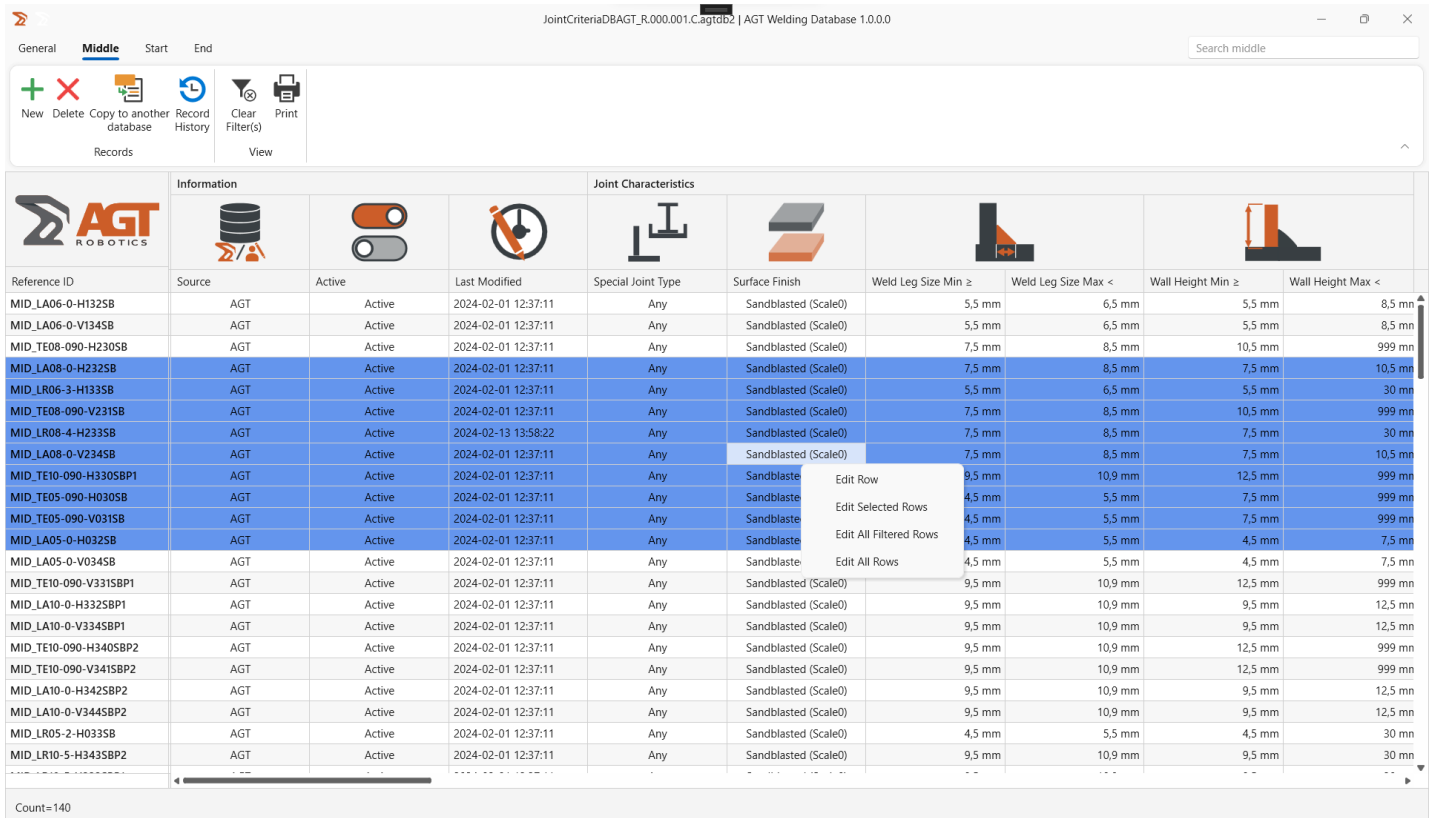

- Press the **Shift** key on your keyboard.
- Simultaneously, click on the **first row** you want to edit.
- Then, click on the **last row** in the range you wish to modify.

1.3.2 Batch Edit:

- As shown in the picture below, you'll notice that **multiple rows are highlighted in blue**. This indicates that they are all selected for batch editing.

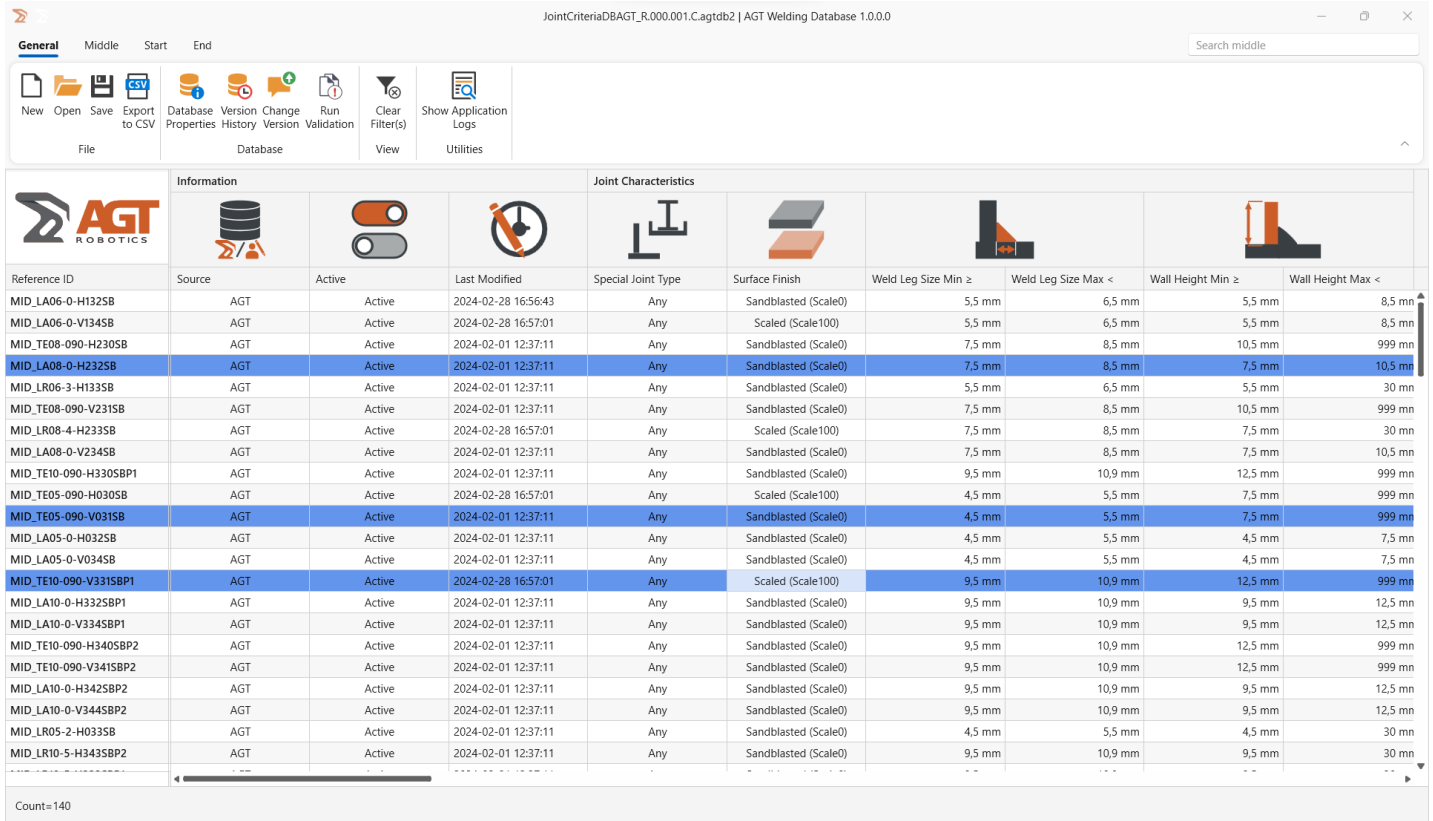

1.3.3 Context Menu:

- To apply the changes, **right-click** in the column where you want to edit the values between the highlighted blue rows. A context menu button will appear.

1.4 If you've chosen to modify only one row, select the option "Edit Row." If you've selected multiple rows, choose the option "Edit Selected Rows."

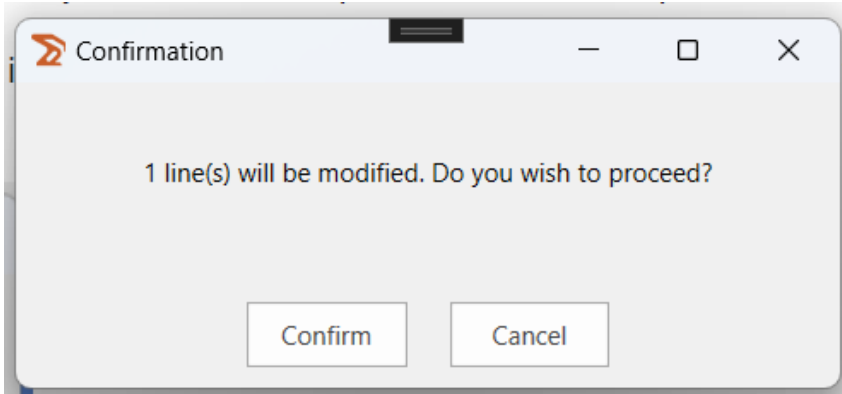

1.5 After making your selection, a pop-up window will appear. In this window, you'll find a dropdown menu with the possible values you can choose from to modify the current value.

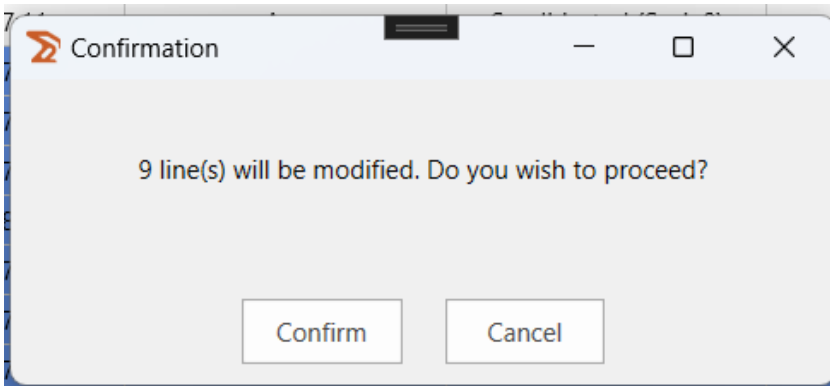

1.6 After selecting your desired value, click the "Apply" button. A pop-up Confirmation window will appear, displaying the number of rows you are modifying. You'll have two options:

- **“Confirm”**: Proceed with the modifications.
- **“Cancel”**: Return to the pop-up editing window without applying the changes.

a) modifying one row

b) modifying multiple rows

1.7 Once you've clicked the **“Confirm”** button, the changes will be applied to the selected cells. Here's a visual representation of how it looks:

2.2 First, choose the corresponding option: either “Edit Row” or “Edit Selected Rows”. Once you’ve made your selection, a pop-up window will appear. In the pop-up window, you’ll find different options for modifying the numerical value.

- **Set Value:** Use this option to directly set a specific value.
- **Add to Current Value:** Add a specified amount to the current value.
- **Multiply by Factor:** Multiply the current value by a given factor.

In the picture below, the edited values are of the selected rows in Weld Leg Size Min.

2.3 Once the **"Apply"** button is pressed, a confirmation window will appear with the number of rows you are about to change and 2 buttons to **"Confirm"** or **"Cancel"** the change.

2.4 Once the changes are confirmed, you will see that the values have been changed to 6. (don't mind the X marks)

3. Edit All Rows:

If you chose the option "Edit All Rows", it will edit all the recipes present in the Database. The value you select will be applied to the entire column where you right-clicked.

4. Edit All Filtered Rows:

If you chose the option "Edit All Filtered Rows", it will only edit the recipes that you've filtered in the Reference ID column. To filter rows, you can either click on the cell titled Reference ID or use the Validation window. Once filtered, you can change the value for the specific column you've chosen.
